

Energy savings

Follow these tips to save on energy bills

Get a better deal

- Understand the details of your bills.
- Three months before your contract expires, shop around for a better deal.
- Compare prices at www.energymadeeasy.gov.au/offer-search.
- You may be able to use a broker to act on your behalf. Check with your industry association if they have any recommendations.
- Look at alternative forms of energy – the price may have dropped.

Electronics

- Buy electronics with high energy star ratings. Remember, these may be a taxable offset if under \$20,000, under the instant asset write-off until June 2019. Learn more at smartcompany.com.au and ato.gov.au.
- Use smart meters to track energy use.
- Set computers to power-off after a set period of time.
- Turn devices off at the power point – don't leave them on stand-by mode.

Light and heat

- Use energy efficient lighting bulbs and devices.
- Make the most of natural light and use direct lighting such as lamps.
- Use shades and curtains to keep out excess heat from buildings.

People power

- Create an action plan to reduce energy consumption.
- Enlist the support of your team to innovate and implement.
- Update your policies to include energy saving tasks.

Reduce how much you use

Keep heating between 18-20 degrees

Keep cooling between 25-27 degrees

Appliances and equipment can be responsible for 33% of an energy bill

Switch off, do not leave in stand-by mode, and you could save up to 10% on your bill

Small steps to reduce costs

When an IGA's electricity bill doubled in price, they began installing LED lights and timers on non-perishable fridges, and became more conservative with their electricity usage. They also sought the advice of an energy broker to review their contract and bargain for a reduced rate. Combined, these strategies led to a reduction of just over 20%. Your energy provider will be able to give you ideas on how best to minimise your energy usage.
